

NORDUnet Virtualized Server Hosting

NORDUnet operate 4 virtualized server environments that are designed as two clusters that are redundantly built and interconnected.

The equipment is located at the NORDUnet core sites in Copenhagen and Stockholm.

Availability

Any Nordic NREN related organization can make use of a "slice" of the setups in Copenhagen and/or Stockholm, for short term or more permanent usage.

Description

Each cluster is built on Nutanix compute and storage nodes and connected using Arista Switches. The virtualisation layer is based on VMWare.

Below you can see the design of the redundant cluster setup.
